

MLS Selects *TRU-Vu* Monitors for New Video Replay System

Major League Soccer (MLS) is one of the first professional soccer leagues in the world to introduce video instant replay systems. TRU-Vu's Sunlight Readable waterproof monitors are at the heart of every system.

After years of research, analysis and debate, the MLS decided to take a historic step forward in international soccer by introducing one of the first video replay systems. The new V.A.R. (Virtual Assistant Referee) enables the referee to review controversial or critical plays to ensure proper decisions are made on the field.

A critical part of the system was certainly the video display. Since all stadiums are outdoor, they needed to withstand all types of weather conditions (heat, cold, rain, snow, humidity) and display crystal-clear video images even in direct bright sunlight. After extensive testing, the SRMW-24Z-SS waterproof 24" Sunlight Readable monitors were selected as the heart of the V.A.R. system. They have been deployed in every MLS stadium in North America.

MLS Officials and teams are extremely pleased with the results. Referees have expressed tremendous approval for the V.A.R. systems and applaud the excellent image quality of our Sunlight Readable video displays.

TRU-Vu is proud to be a part of this historic step for U.S. Soccer, and looks forward to future systems in the German Bundesliga and other leagues throughout the world.

The V.A.R. System at Toyota Park in Chicago
